Product description

Used loading ramp made of steel on solid rubber wheels. A wheeled loading ramp is a ramp specially designed for loading and unloading containers and trucks with a forklift. This used loading ramp is an 11-metre long, height-adjustable ramp with a sloping ramp under which a set of wheels is mounted to make it completely mobile.

Advantages

- Can be used at several locations, even when they are relatively far apart.
- up to 3x faster loading/unloading than the conventional way with a hand pallet truck in the container.
- huge savings in time and labour (fewer people can load/unload a container faster), investment quickly recouped.
- in the case of heavy drums, crates or pallets, a container loading ramp works more safely and improves working conditions when loading/unloading.

Specifications

Article arrangement: Used

Version: adjustable in height

Wheels front: solid rubber tyres • 400 mm

Surface treatment: painted and use damage

Width (mm): 2260

Height (mm): 1105

Drive width: 2060

Max Height (mm): 1750

Type: mobile

Material: steel

Colour: blue

Length (mm): 11000

Internal width (mm): 2060

Type number: 7310GB

Min Height (mm): 1105
